Ballet, painting, travelling, cinematography, foreign languages (English, German)

Purpose

When I was on the third course of university we had the discipline 'Web design', where we studied a basic knowledge of Photoshop, Illustrator, HTML and CSS. After this course I understood that I am really interested in this area. I started to study by my own: I watched a lot of educational videos, read technical literature and books. First difficulties, first web-pages. Now I am into JavaScript. My purpose is to create interactive, adaptive, dynamic Web-pages and to become a Front-end developer. And I am sure that I am patient and hardworking enough to succeed.

That is why I want to obtain a position as a trainee in your company. It will help me to develop, learn from professionals, improve my skills and to get a great experience.
